Talent Bank from Keystone is revolutionising how universities and other education institutes handle temporary and permanent staffing, compliance, timesheet & payroll services whilst enhancing their student employability and careers programmes.

Improve compliance and stay 'audit-ready' - Dispense with high-risk legacy processes and paper-based controls by moving all compliance into a secure online solution with right-to-work information intrinsically attached to a worker profile. Working hours rules are configurable and system driven, ensuring the risk of breach is eradicated. All worker information is securely accessed in one place, making light work of audits and reporting.

Update your timesheet and payroll services in one move - Your online Talent Bank portal automatically generates electronic timesheets for temporary workers, all completed and approved by managers online and processed in a matter of clicks. Choose to output a simple weekly file into your existing payroll service or use Keystone's complete payroll solution - the option is yours.

Improve student employability - by running your own Talent Bank your students can all create a rich online profile, enabling your university and external business partners to view your talent and offer work assignments to students based on their skills, availability, interests and compliance. Monitor all work activity among the student base and improve your insight into the opportunities to learn-while-you-earn. With a safe and secure online portal opportunities can be offered 24/7 wherever your students are in the world. Bring the 'job-fair' concept into the 21st century.

Everything in one place - Universities often have a range of legacy systems making management of temporary workers time consuming and difficult to track. With a single online portal for all activity, all departments and stakeholders have access to the relevant information and systems 24/7. Moving away from paper based processes improves accuracy, timeliness and compliance throughout the entire lifecycle of a temporary work assignment.

Low cost and VAT friendly - dispense with agency fees and the VAT they attract, with a low cost 'software as a service' model customised to fit your university and its budget.
